Listing of Claims:

1. (previously presented): A method for assembling a compilation of media content, comprising:
   (a) receiving at least one user-defined classification for at least one piece of media content, said at least one user-defined classification and
   (b) receiving a criteria set of desired media content, said criteria set including said at least one user-defined classification and a time period;
   (c) analyzing pieces of media content to determine if each piece of media content is in accordance with said criteria set; and
   (d) compiling a collection of media content; wherein said collection of media content is based upon said criteria set, wherein said time period refers to a duration of said collection of media content.

2. (original): The method as claimed in 1, wherein said at least one piece of media content is an audio file.

3. (original): The method as claimed in claim 2, wherein said audio file is in an MP3 format.

4. (original): The method as claimed in claim 1, wherein said criteria set includes at least one of a physiological input, a schedule input, and a user input.

5. (original): The method as claimed in claim 4, wherein said physiological input includes at least one of heart rate and motion detection.

6. (original): The method as claimed in claim 4, wherein said schedule input is an activity planned and documented on a scheduling system capable of being received.

7. (previously presented): A program of instructions storable on a medium readable by an information handling system to execute steps for assembling a compilation of media content, the steps comprising:
   (a) creating a tag for at least one piece of media content in accordance with a user-defined classification;
   (b) receiving a criteria set of desired media content, said criteria set including said at least one user-defined classification and a time period;
   (c) analyzing said tag for at least one piece of media content to determine if it is in accordance with said criteria set; and
   (d) compiling a collection of media content; wherein said collection of media content is based upon said criteria set, wherein said time period refers to a duration of said collection of media content.

8. (original): The program of instructions as claimed in claim 7, wherein said at least one piece of media content is an audio file.

9. (original): The program of instructions as claimed in claim 8, wherein said audio file is in an MP3 format.

10. (original): The program of instructions as claimed in claim 7, wherein said criteria set includes at least one of a physiological input, a schedule input, and a user input.

11. (original): The program of instructions as claimed in claim 10, wherein said physiological input includes at least one of a heart rate counter and motion detection.

12. (original): The program of instructions as claimed in claim 10, wherein said schedule input is an activity planned and documented on a scheduling system capable of being received.

13. (previously presented): A content assembling system, comprising:

(a) a media content storage device;

(b) means for identifying a piece of media content located in said media content storage device, said identifying means being capable of displaying a user-defined classification;

(c) means for receiving a criteria set, said criteria set including said at least one user-defined classification and a time period; and

(d) means for assembling a compilation of media content; wherein said assembling means is capable of searching said media content storage device for media content in conformance with said criteria set by analyzing said identifying means,

wherein said means for receiving a criteria set includes information from at least one physiological input, said at least one physiological input including a heart rate counter and motion detection, and said time period refers to a duration of said collection of media content.

14. (original): The system as claimed in claim 13, wherein said media content storage device is at least one of a hard drive, a server, or a portable storage medium.

15. (original): The system as claimed in claim 13, wherein said identifying means includes a tag capable of describing at least one attribute of said piece of media content.

16. (previously presented): The system as claimed in claim 13, wherein said receiving means may include information from at least one of a user input or a personal scheduler.

17. (original): The system as claimed in claim 13, wherein said piece of media content is an audio file.

18. (previously presented): The system as claimed in claim 17, wherein said audio file is in an MP3 format.

19. (original): The system as claimed in claim 13, further comprising means for playing said media content operably connected to said assembling means.

20. (original): The system as claimed in claim 19, wherein said playing means is a remote media content player.

21. (original): The system as claimed in claim 20, wherein said remote content player is capable of allowing a user to rate a piece of media content included within said compilation.

22. (previously presented): A program of instructions storable on a medium readable by an information handling system to execute steps for assembling a compilation of media content, the steps comprising:
    (a) creating a tag for at least one portion of a piece of media content in accordance with user-defined classification, said tag including a personal rating of said at least a portion of said at least one piece of media content;
    (b) receiving a criteria set of desired media content, said criteria set including said at least one user-defined classification and a time period;
    (c) analyzing said tag for at least one piece of media content to determine if it is in accordance with said criteria set; and
    (d) compiling a collection of media content; wherein said collection of media content is based upon said tag and said criteria set,wherein said time period refers to a duration of said collection of media content.

23. (original): The program of instructions as claimed in claim 22, wherein said portion of said piece of media content is an audio file in an MP3 format.

24. (original): The program of instructions as claimed in claim 22, wherein said criteria set is created by an electronic schedule.

25. (canceled)

26. (original): The program of instructions as claimed in claim 22, wherein said criteria set is created by a user's location.

27. (original): The program of instructions as claimed in claim 22, wherein said schedule input is an activity planned and documented on a scheduling system capable of being received.

28. (previously presented): The method as claimed in 1, wherein said time period corresponds to a totality of the duration of playback of said collection of media content.
